1. Introduction

It was only recently, after having finished my work on EDH-1, EDH-2, EDH-3 and EDH-4 (Tóth 2007), that I could get from Europe the very seldom booklet about Magyar-Mongolian comparison by Szentkatolnai (1877) which is completely unavailable in the United States. In the Mongolian examples in chapter 2, I will use the same orthography as Szentkatolnai (including “cz” for today Hungarian’s “c”) did. Two additions of his etymologies are mine (“add. Tóth”), taken from Vietze (1981), because the author obviously forgot them.

With Mongolian closely related is the question of the language of the Avars, perhaps also of the Huns, Scythians, Medes, Parthians and other people, the origin of the Székelys and generally the questions if the languages of these peoples are also of Sumerian origin and if there is thus a continuity of Hungarian presence in the Carpathian basin (cf. f. ex. Bobula 1966, spec. pp. 43ss.). We restrict ourselves in the present study first to the proof that Mongolian is very closely related to Hungarian and that both languages go back to Sumerian and second to show that Avaric was really – as already postulated by Pray (1774) and von Klaproth (1831) – Mongolian or perhaps better Proto-Mongolian.

The following map (copyright: University of Graz, Institute for Linguistics) displays the actual Mongolian territory:

Why did the Mongolians attack Hungary in the 13th century? Was it only because they were a people of warriors or is there a connection with the many attacks that the Turks did a few centuries later? The Mongolians conquered parts of China, the empires of the Choresmians, Tanguts, the biggest part of Russia and other parts of Eastern Europe, in 1241 they reached Silesia and one year after even the Adria. The Turks, after having conquered the Hungarians 1526 in Mohács, even went until Vienna (cf. Weiers 2004). A short comparison between the Mongols and the Turks shows that they obviously tried to regain lands that their forefathers once possessed. This is clear from their mythologies in which they believed, since mythology played the role that history would play after. And the Carpathian basin belonged to the territory both of the Mongols and of the Turks because Mongols, Turks and Hungarians all originate from the Sumerians – as my extensive etymological lists in EDH-1 to EDH-4 as well as the work done by my “ancestors” clearly prove. In the following chapter, I will show the amazingly high number of shared cognates between Sumerian, Hungarian and Mongolian and in the subsequent chapter the common Sumerian-Hungarian-Avaric and Sumerian-Hungarian-Hunnic origin of the few words that we know from the Avars and the Huns.

Mongolian thus shares 559 of 1042 words of the basic word list taken from Gostony (1975) with Sumerian-Hungarian, i.e. 54%. In the hierarchy published f. ex. in EDH-4, Mongolian stands therefore between Turkish with 55% and Tibeto-Burman with ca. 50%. But the effective percentage of Sumerian-Hungarian-Mongolian cognates is even higher, as we will see in the next chapter.

3. Sumerian, Hungarian and Avaric

Although we have ca. 2'000 Avaric archeological sites and 50'000 graves (Pohl 1988, p. 13), we only have 13 Avaric names and 1 appellative (Moravcsik 1983, pp. 359, 363).

The following map is showing the Avar Khaganate, ca. 650 AD (copyright: Wikipedia):

The question, to which language Avaric belonged, stayed thus controversial: Menges (1973, 1986) and Futaky (2001) are sure that they were Mongolians, while f. ex. Gombocz, Németh and Moravcsik himself claimed that they were Turks (Pohl 1988, p. 223). Now, Futaky proved that the following 41 Hungarian words came via the Avars from the Mongolians and the Manchu: *beze/bezzeg, bízni, deber/deberke, diadalom, gangos, gárgyulni, genge/gyenge, kebel, üldeni/üldözni, üstök* (directly from Mongolian); *beteg, bukni, csatak, csupa, dédelni/dédelgetni, egerni/egercsélni, eszten(nap), gór, gyep/gyepű, hajdan, hamar, ij, isa, ítélni, kalán/kanál, koszorú, legelni, mancs, metni/metszeni/metélni, mind(en), nyáj, oldal, távészni, tékozni, tor/torolni/torló, zsombék* (directly from Mandschu); *elég/elegendő, gyere, ördög, telek* (both from Mongolian and Manchu). The 4 words *dalin/dalm, gyámolni, selyem* and *tung* came from Chinese via Mongolian and/or Mandchu mediation (the Silk Road went, as every Hungarian knows, through Hungary). Moreover, Futaky presents 2 place names and suspects many more of Avaric origin, basically in Western Hungary where he thinks that the Avars survived until the 9th century, thus proving an Avaric-Hungarian continuity in the Carpathian basin (2001, pp. 133ss.). Together with these 45 words – a few of them are part of Gostony's 1042 words-list (cf. chapter 5 in EDH-1) -, Mongolian ranks even higher than Turkish in the hierarchy of Sumerian-Hungarian genetical relationship. This is another hint for Sumerian-Hungarian-Avaric continuity.

4. Conclusions

We know from von Torma (1894), Bobula (1951), Vlassa (1963), Badiny (2001) and Tóth (2007a) that the Sumerians originated in Transylvania before they migrated to Mesopotamia, from where they spread out and a part of them went back in the Carpathian basin. The Sumerian-Hungarian genetical-linguistic relationship was proved in a long series of books and articles, last in EDH (Tóth 2007). The Huns were already considered to be Mongolians by Deguignes, Pallas and Bergmann (cf. Doerfer 1973, p. 13). The genial German orientalist Julius von Klaproth (Berlin 1783-Paris 1835) identified them directly with the Hungarians (Klaproth 1831), cf. also Moravcsik (1983, pp. 231ss.). Moreover, the Avars as well as the Scythians were already identified with the Huns by Konstantinos Porphyrogenetos in the 10th century, who also first mentioned the Magyars as “*sabartoi asphaloi*”, showing thus the genetical relationships of the Hungarians and the Mesopotamian Subaraens (Moravcsik 1983, pp. 53, 279). The Medes were stated as Scythians by the famous orientalist Friedrich Wilhelm König who showed also that they originated in the Zagros mountains in Mesopotamia (König 1934). Finally, that the Parthians were a Scythian people, is accepted by everybody today, cf. Colledge (1967) and was shown on Sumerian background by Badiny (1998, 1999).

From all these identifications it follows together with our proof presented here in EDH-5 that there is a genetical linguistic relationships of Sumerians, Huns, Avars, Scythians, Medes, Parthians and probably more people and a geographical continuity of Sumerians, Huns, Scythians and Avars in the Carpathian basin.

Of course, to such a conclusion one cannot come if one excludes possible other than “Altaic” language connections of Mongolian, Avaric and Hunnic and then wonders that one gets “unknown etymologies”. Typical of this kind of linguistic under-determination is Doerfer’s remark: “Offenbar sind also die hunnischen Namen nicht eindeutig als türkisch zu erklären, besser: Sie sind *überhaupt* nicht zu erklären, sie gehören einer unbekanntem Sprache an” (Obviously, the Hunnic names thus cannot be explained by Turkish, or better: One cannot explain them *at all*, they belong to an unknown language).
